PROPOSE EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Joshua Dobrowitsky on 8/11/05.

The application has been amended as follows:

In claim 1 line 7, delete "modulating" and insert

-- increasing or decreasing a processor execution time by increasing or decreasing --.

Cancel claims 9-16.

In claim 17 line 8, delete "modulating" and insert

-- increasing or decreasing a processor execution time by increasing or decreasing --.

2. The following is an examiner's statement of reasons for allowance:

Claims 1-8 and 17 have been carefully considered in light of the specification and the drawings of the invention. The claimed invention is directed into a method and an apparatus for managing processor execution time in a motor controller. Claims 1-8 are method claims, and claim 17 is an apparatus claim in terms of means plus function. Claim 17 is interpreted in view of the specification under 35 U.S.C. 112, sixth paragraph. The claimed invention recites a method of receiving motor speed data, comparing the received motor speed data to predetermined motor speed ranges,

Art Unit: 2837

determining a motor speed range based on the comparison, and increasing or decreasing a processor execution time by increasing or decreasing an inverter switching frequency of a motor controller processor based on the determined motor speed range. The references of the record, in particular of Nada et al (6,654,648), fail to teach or suggest the combination of the method step of increasing or decreasing a processor execution time by increasing or decreasing an inverter switching frequency of a motor controller processor based on the determined motor speed range. This method step is interpreted in light of the processor 120 having a high frequency injection algorithm 135 and a processor control algorithm 140 in order to provide the increasing or decreasing processor execution time by increasing or decreasing an inverter switching frequency of a motor controller processor based on the determined motor speed range according to the specification of the invention. The recited method step is based on the support of the motor controller processor and its function as recited in the specification of the invention..

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
